

Best Practices for a successful IT project

for a successful IT project

The following "golden rules" might help to have a successful IT project:

- **Separation of concerns**
Divide you problem into smaller (business oriented) modules, which can be easily adopted.
- **Security and data protection by design**
When coming to planing and design phase, alle aspects of security and data protection have to be included.
- **KISS**
KISS stands for "Keep It Stupid Simple". Always use the simplest und most readable solution to solve your problem. Do not overingenieur.
- **Use automation wherever possible**
Automate all thing as much as possible. Even if you think, it has to be done only twice or three times.
